

The application in this directory is designed to observe P protocol communication as it passes through a PC. The default baud rate and parity of this application is 9600 baud, odd parity (this can be change in the source code to suit your application). The type of P Protocol that this application observes is the P Protocol transmitted and received by a CM9760-KBD and a CM9760-DT.

This application recognizes about 90 percent of the keyboard or DT commands that pass through it. Commands that aren't recognized are displayed as hex bytes so the user can at least try to figure out what the command is.
