1 Bilinx with a PAL Bosch LT-620 camera only attached

Note

1. The camera model is **LTC0620/11** with a random lens from the optics lab.
2. The “head-end” is a model **VP-RS2BLNX**, Serial to Bilinx converter.
3. The software used is Bosch’s “Configuration Tool for Imaging Devices” (**CTFID**) Rev 3.05.0002. The user manual is 57 pages long. (Two screen shots are in Figure 25, page 28 and Figure 26, page 29.)
4. Voltage levels on the oscilloscope pictures are off by a factor of ten, because I forgot to reset the display values after using a X10 probe.
5. The sync point (Figure 1, page 4) on the oscilloscope that was used here was not at the start of a field, but is offset somewhat. However the offset is consistent with all captures.
6. There is a location in each field (Prime and Alternate fields) marked out for data. (Figure 1, page 4, Figure 3, page 6)
7. Data format:
 - 7.1 The data appears to have 31 “semi-variable” duration pulses available on each line. (Figure 10, page 13, Figure 11, page 14)
 - 7.2 It appears that “1”’s are $1\mu s$ long. (Figure 12, page 15)
 - 7.3 It appears that “0”’s are $.5\mu s$ long. (Figure 13, page 16)
 - 7.4 There are $1\mu s$ and $.5\mu s$ gaps in the data which are not fully explained.
 - 7.5 Could this be Manchester (Bi-Phase) formatted data?
8. It is difficult to capture “data” as there is not data on every field, nor is it in every frame.
9. When the camera (LTC0620/11) and converter (VP-RS2BLNX) are connected together, the area “blocked out” for data changes from one line to ten lines. (Figure 1, page 4, Figure 15, page 18 and Figure 17, page 20)
10. When using the Bosch’s CTFID software, the downloading, control, etc., never uses more than the first three TV lines.
11. When connecting the camera to the converter box, it was noted that there are two different voltage levels in use for the “data block”.
 - 11.1 The camera uses a signal that is about 384 mV P-P. (Figure 23, page 26)
 - 11.2 The converter uses a signal that is about 240 mV P-P. (Figure 20, page 23)
12. Pelco Europe said that Bilinx does not have pan/tilt capability. From looking at the options in the CTFID software it definitely does. Navigation through the menus is quite successful.
13. When the CTFID software is turned off, the converter box and the camera continue to “talk” to each other.
